2. Citations and explanations (Rule 70.7)

The claimed invention

The claimed invention related to a method of real-time broadcasting in mobile communication system, by setting dedicated broadcasting resource.

Reference is made to the following documents:

D1=CN1090444A

D2=CN1357179A

D3=WO0079734A1

Document D1 discloses (see the whole document), two-way interactive video network appts. for point-to-point transfer of synchronous digital messages, has network switching center controlling data transfer between subscribers at different locations. Local area base station cell sites are subdivided into zones for processing communications within the zones from subsets of subscriber units of a configuration for integrating communications into a nationwide network of interconnected base station cell sites for point-to-point communications with identified remote subscriber units. But document D1 does not disclose that the said mobile terminal can process general service, and switch freely among services.

Document D2 discloses (see the abstract) a CDMA cell structure of telecommunication system, has primary and secondary downlink carriers whose respective codes are configured to scramble specific common channels. A primary downlink carrier has a code that is configured to scramble non-power controlled common channels, for transmission over a specific downlink bandwidth. A secondary downlink carrier has a code configured to scramble only the power controlled channels, for transmission over preset downlink bandwidth. It is considered to merely disclose the state of the art and is not commented on further.

Document D3 discloses (see the whole document), a system and method for receiving over a network a broadcast from a broadcast source. it providing a broadcast to a receiver via a communication network. A streaming real-time multimedia content(which relates to entertainment, music and /or interactive game industries) can now be provided over the internet. Application-layer multicasting arrangement for the real-time broadcast traffic, support of a fast-handoff of the IP streams when the mobile clients move from one domain to another., they provide a utilization of either conferencing or broadcast mode. But document D3 does not disclose that the said dedicated service layer is setup.

Consequently, the claimed invention as in claims $1\sim20$ is considered to be novel, to involve an inventive step and to have industrial applicability.

2. 引征和解释(细则70.7)

本申请

本申请涉及一种通过设置专用广播资源,在移动通信系统中实现实时广播的方法。

检索报告中引用了以下对比文件:

D1 = CN1090444A

D2 = CN1357179A

D3 = W00079734A1

D1 = CN1090444A公开了一种交互式全国数据业务通信系统,并具体公开了以下技术特征:本发明的一个目的是引入便携式数字通信用户单元到是适应与本地和全国通信的交互式视频数据业务系统,基站用于并行通信的很大数量的单个地识别的用户并且无重大延迟地连接新的用户到等待通信的时隙,但没有公开所述移动终端也能进行语音等常规业务,以及业务切换等。

D2 = CN1357179A公开了一种蜂窝网中实现多载波的系统和方法,并具体公开了以下技术特征:主载波具有主扰码或可加多个相关副扰码,而副载波具有一个或多个相关副扰码,主扰码加扰所有信道,如专用信道、非功率控制公共信道,而副扰码仅加载专用信道和可选的功率从控制信道。仅仅公开了相关背景技术。

D3=W00079734A1公开了一种通过网络接收广播的方法和系统,并具体公开了以下技术特征:通过通信 网络接收广播,通过互联网提供实时多媒体内容的数据流,应用层广播配置用于实时广播业务,当移动台从一个区域移动到另一个区域,支持 IP 数据流的快速切换,提供了会议模式和广播模式。但没有公开设置专用的广播业务层。

因此, 权利要求 1~20 所要保护的方案具有新颖性, 创造性和实用性。
